TECHNICAL HIRING · AI VOICE INTERVIEW PLATFORM BUILD

Hire Voice

An AI-Powered Voice Interview Platform for Scalable Technical Hiring

An AI bot that conducts spoken technical interviews end-to-end in the browser — asking questions aloud, understanding answers in real time, and scoring every transcript into a shareable PDF report — while interviewers observe invisibly, join in, or pause the AI at any moment.

INDUSTRY	SCOPE	ENGAGEMENT
Technical hiring / talent acquisition	Live voice AI interviews, question sets, evaluation & reporting	End-to-end platform build — web, AI & ERP integration

01 — ABOUT THE CLIENT

Where senior engineers were the hiring bottleneck

The client's technical hiring runs through HR and talent-acquisition teams whose biggest constraint is interviewer availability. Screening rounds consume senior engineers' time — each first-round interview occupies an experienced interviewer for an hour or more including preparation and write-up — scheduling across time zones delays pipelines, and quality varies from panel to panel. As hiring volumes grow, the organisation needed consistent, high-quality technical interviews at scale, without proportionally scaling interviewer effort.

02 — THE CHALLENGE

Six bottlenecks, one hiring funnel

Senior time on screening

Screening interviews consumed scarce senior-engineer time better spent on later-stage assessment — and scheduling delays lost strong candidates to faster-moving competitors.

Inconsistent interviews

Interview quality and questioning depth varied between interviewers, weakening comparability of candidates applying for the same role.

Slow, uneven preparation

Preparing good question sets for each role was time-consuming and inconsistently done — and results were recorded inconsistently, making structured evaluation and audit difficult.

Disconnected from the ERP

Candidate information lived in the ERP, but interview tools were disconnected from it, forcing duplicate data entry and fragmented records.

03 — THE SOLUTION

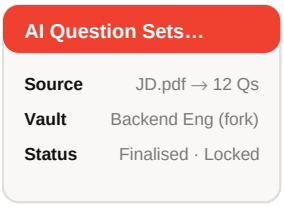
AI conducts, humans stay in control

Soft Suave delivered HireVoice as a platform that automates the interview lifecycle while keeping interviewers in control — AI-generated, lockable question sets; live voice sessions over WebRTC in which an AI bot interviews the candidate in real time; and an AI evaluation pipeline turning every transcript into structured scores and a shareable PDF report.

01 AI Question Sets & Expert Vault

19 DOMAINS

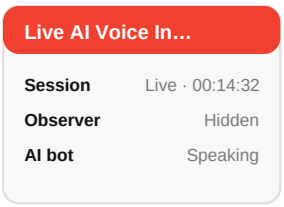
Interviewers generate question sets from text or PDF prompts within configurable guardrails, or fork ready-made sets from a curated Expert Vault spanning 19 domains — then review, edit and lock the approved version.



02 Live AI Voice Interviews

WEBRTC · REAL-TIME

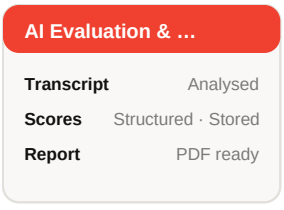
An AI bot asks questions aloud and understands answers as they're spoken, entirely in the browser. Interviewers observe invisibly, join as a third participant, or pause and resume the AI at any moment.



03 AI Evaluation & PDF Reports

POST-SESSION

After each session, an AI evaluation pipeline analyses the full transcript and produces structured scores, delivered as a professionally formatted PDF report that interviewers download and share with the hiring team.



Interview capacity no longer bounded by interviewer availability — consistent, structured, auditable technical interviews at scale, with humans in control throughout.

04 — KEY FEATURES

Twelve capabilities, one platform

- Live AI Voice Interviews (TTS + STT)
- Hidden Observer Mode
- Join as Third Participant
- Pause / Resume AI Mid-Session
- AI Question-Set Generation (Text & PDF)
- Configurable Generation Guardrails
- Finalise & Lock Question Sets
- Expert Vault — 19 Curated Domains
- ERP Candidate Search & Upsert
- Structured AI Scoring of Transcripts
- Downloadable PDF Interview Reports
- Time-Bounded Role-Based Access

05 — RESULTS & IMPACT

What AI interviewing delivers at scale

75%
Reduction in end-to-end recruitment time in a published enterprise AI-interviewing programme

50k+
Hours of interview time saved annually in the same benchmark programme

£1M+
Annual savings delivered by AI-assisted interviewing at enterprise scale

16%
Increase in hiring diversity reported after moving to AI-based interviewing

Figures are published results from a benchmark enterprise AI-interviewing programme, provided as representative context — not measurements from this engagement.

WHY SOFT SUAVE

Voice AI, engineered for trust

An AI that interviews real candidates has to earn the trust of everyone in the room. Soft Suave built that in: interviewers can observe, join or pause the AI at any moment; every candidate for a role faces the same locked question set and scoring approach; the full conversation is captured for evaluation and audit; and access is role-based with time-bounded sign-in. Real-time audio is engineered for natural dialogue — low-latency speech in and out over WebRTC — and the hiring decision always stays human.
