Market Mind

AI-Native Multi-Tenant Market Intelligence for Traders and Analysts

Letting each client organisation onboard its own market data, automate news and research collection, and ask questions in plain English — with an AI orchestrator coordinating specialised agents so every answer is grounded in the firm's own data, under strict tenant isolation.

INDUSTRY
Finance, trading & commodities markets

SCOPE
Agent orchestration, newsfeed intelligence, RAG knowledge base, multi-tenancy

ENGAGEMENT
End-to-end platform build on managed cloud

01 — ABOUT THE CLIENT

Where speed of insight is the edge

The client serves traders and market analysts in finance, trading and commodities markets — users who depend on fast, accurate intelligence drawn from internal market data, research documents, news feeds and external data services. The competitive edge lies in how quickly raw information becomes decision-ready insight. And because one platform serves multiple client organisations at once, financial-institution-grade security, strict organisation-level data isolation and role-based access were table stakes from day one.

02 — THE CHALLENGE

Insight was scattered, slow and hard to trust

Scattered market intelligence

Market intelligence sat across databases, documents, news feeds and external services, with no unified access point for the people who needed it.

Insight gated by specialists

Extracting insight required SQL, scripting or waiting on analysts and IT — slowing trading decisions at the moments speed mattered most.

Manual news monitoring

Traders scanned news feeds themselves, so valuable market signals were missed entirely or acted on too late to be useful.

Generic AI can't be trusted

Generic AI assistants aren't grounded in the organisation's own data — and serving multiple firms demands strict isolation that ad-hoc tools can't provide.

03 — THE SOLUTION

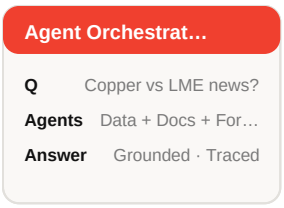
Agent intelligence over the firm's own data

Soft Suave delivered MarketMind as an enterprise-grade, multi-tenant cloud platform: an AI orchestrator dynamically coordinates specialised agents — data querying, document retrieval, external API calls, business rules and formula execution — so a trader's plain-English question is answered from real organisational data, never generic model knowledge.

01 Agent Orchestration Layer

5 AGENT TYPES

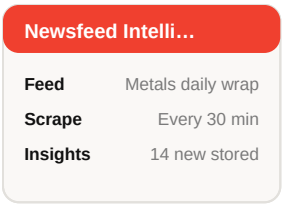
An AI orchestrator interprets each question and coordinates the right agents in real time — querying data, retrieving documents, calling external APIs, applying business rules and executing formulas — composing one grounded, traceable answer.



02 Newsfeed Intelligence Pipeline

SELF-SERVE RSS

Traders register RSS feeds and schedules themselves; the platform scrapes articles on schedule, distils them into structured insights and stores them in a dedicated insights layer — instantly queryable through the AI.



03 Multi-Tenant Knowledge Base

RAG · ISOLATED

Uploaded PDFs and scraped news are automatically chunked, embedded and made semantically searchable per organisation — with strict tenant isolation, role-based access and dual authentication for human and system users.

Plain-English questions, answers grounded in the firm's own data — delivered with the isolation and auditability financial institutions demand.

04 — KEY FEATURES

Twelve capabilities, one platform

- Natural-Language Market Queries
- Dynamic AI Agent Orchestration
- Automated PDF & News Ingestion (RAG)
- Semantic Search over Firm Knowledge
- Self-Configured RSS News Pipelines
- Org-Defined Business Rules & Formulas
- Strict Organisation-Level Data Isolation
- Role-Based Access for Three Roles
- Dual Authentication (Sign-On + API Keys)
- Three Independently Scalable Services
- Distributed Tracing & AI Cost Tracking
- Automated CI/CD for Every Service

05 — RESULTS & IMPACT

What comparable analytics platforms deliver

35%
Analyst time saved on data analysis in a benchmark cloud-analytics deployment

50%
Time saved on data preparation and processing tasks in the same study

209%
Three-year ROI measured for a comparable cloud analytics platform

<6 mo
Payback period reported for comparable analytics platform investments

Figures are from a published Forrester Total Economic Impact study of a comparable cloud analytics deployment — representative benchmarks, not measurements from this engagement.

WHY SOFT SUAVE

Enterprise AI, isolated by design

A multi-tenant AI platform for financial institutions lives or dies on trust. Soft Suave engineered that trust in from the start: organisation-level data isolation enforced at every layer, role-based access, secrets held in a managed store and never in code, dual authentication for human and system users, and every request traced end-to-end with AI token usage tracked per tenant. Three independently scalable services with asynchronous messaging keep trading-desk queries responsive while ingestion runs in the background — and automated CI/CD ships every change repeatably and safely.
