MARITIME & ENERGY · AI INCIDENT MANAGEMENT PLATFORM

Safe Ops

AI-Driven Incident Management and Compliance Optimization for Offshore Operations

Automating incident classification, emergency response coordination and regulatory compliance for marine operators, national oil-and-gas producers and offshore rig departments — real-time processing and AI-driven insights that speed up decisions, streamline incident handling and keep operations continuously audit-ready.

INDUSTRY
Maritime & offshore oil-and-gas operations

SCOPE
AI categorization, emergency response, compliance, incident lifecycle

ENGAGEMENT
End-to-end platform design, development & delivery

01 — ABOUT THE CLIENT

Safety-critical operations at sea, every day

The client operates in the maritime and offshore energy sector, where marine operators, national oil-and-gas producers and rig departments run safety-critical operations around the clock. Every incident, hazard and near miss must be reported, investigated and closed under strict regulatory oversight, with roles, responsibilities and work-item progress tracked across multiple domains — from incident reporting to near-miss tracking. Keeping that record accurate and audit-ready at all times is essential to safe, compliant operations.

02 — THE CHALLENGE

Manual, siloed and exposed to audit risk

Manual incident processes

Manual incident tracking caused delays and reporting bottlenecks — critical information moved only as fast as the paperwork behind it.

No visibility into progress

A lack of visibility into roles, responsibilities and interventions hindered progress, leaving teams unsure who owned what during incident handling.

Compliance at risk

Manual regulatory checks increased the likelihood of audit failures — documentation and compliance status were only as current as the last manual review.

Fragmented, siloed systems

Operational data sat siloed across separate systems, preventing the holistic analysis needed to spot patterns and recurring risks.

03 — THE SOLUTION

Three AI modules across the incident lifecycle

Soft Suave delivered an AI-powered incident management and compliance platform that automates key workflows with real-time processing and insight — classifying incidents for faster triage, coordinating emergency response with live alerts and resource tracking, and managing the entire lifecycle from first report to root cause, corrective action and closure.

01 AI-Powered Categorization

INCIDENTS · HAZARDS · NEAR MISSES

Automates classification of incidents, hazards and near misses for faster triage — with AI-driven document analysis and standard suggestions recommending the right response for each issue.

AI-Powered Categ…

Type	Near miss
Severity	Medium · Triage 0…
AI suggestion	Standard 4.2

02 Real-Time Emergency Response

LIVE ALERTS · ERT

Delivers live alerts, resource tracking and emergency response team coordination — with in-app emergency services and team communication keeping everyone aligned as events unfold.

Real-Time Emerge…

Alert	ERT dispatched
Resources	4 tracked
Status	Response active

03 Compliance & Incident Lifecycle

Connects reporting, investigation, corrective actions and closure in one platform — aligned with safety standards, with documentation and audits automated and root cause captured for every incident.

Compliance & Inc…

Lifecycle	Report → Closure
Root cause	Identified
Audit status	Current

One AI platform from first report to closed action — faster response, continuous compliance and a complete, audit-ready operational record.

04 — KEY FEATURES

Twelve capabilities, one platform

- AI-Driven Document Analysis
- AI Categorization of Incidents & Near Misses
- AI Standard Suggestions for Issues
- Real-Time Emergency Response Monitoring
- Live Alerts & ERT Resource Tracking
- In-App Emergency Services & Team Communication
- Integrated Incident Management (Report to Closure)
- Root Cause Analysis & Investigation
- Automated Compliance Tracking
- Corrective Actions & Closure Management
- Roles, Responsibilities & Work-Item Tracking
- Version Control & Document Revision Management

05 — RESULTS & IMPACT

Faster response, leaner operations, cleaner audits

70%
Faster incident response through automated access to critical information

80%
Reduction in manual effort across data handling and tracking

60%
Improvement in compliance efficiency via continuous automated monitoring

50%
Operational cost savings from streamlined, automated workflows

Figures represent reported outcomes of the platform as delivered for this engagement.

WHY SOFT SUAVE

AI depth for safety-critical operations

Incident management in the maritime and offshore energy world leaves no room for lost reports or missed regulatory checks. Soft Suave delivered a platform trusted with that responsibility: AI categorization that triages incidents, hazards and near misses in real time, compliance automation that keeps documentation and audits continuously current, and an integrated lifecycle tracking every role, responsibility and work item from first report to root cause and closure — turning a manual, fragmented process into a connected, audit-ready operation.
