ENERGY / LNG · ON-PREMISES PROCUREMENT AI PLATFORM

Tender Intelligence

An AI-Powered Contract & Tender Management Lifecycle Platform

From Contract Strategy to closure — AI-assisted drafting, deterministic evaluation and an immutable, timestamped audit trail across a ten-phase tender lifecycle. Delivered entirely on-premises for a leading LNG operator in Oman, with sealed-bid integrity preserved and full English and Arabic support throughout.

INDUSTRY	SCOPE	ENGAGEMENT
Energy / LNG — enterprise procurement	End-to-end 10-phase tender lifecycle	Full-stack AI platform, fully on-premises

01 — ABOUT THE CLIENT

Procurement at enterprise scale

A leading LNG operator in Oman runs complex, high-value tenders across its supply chain under strict governance. It set out to build an AI-powered contract and tender management platform spanning the full lifecycle — from Contract Strategy through evaluation and award to closure — while keeping every record on-premises, preserving sealed-bid integrity and maintaining an immutable audit trail at every step. Five stakeholder personas, two languages and zero tolerance for untraceable decisions set the bar for delivery.

02 — THE CHALLENGE

Four problems across the tender lifecycle

Slow, manual tender cycles

Multi-stage tendering with hand-drafted documents and manual handoffs stretched cycle times and made progress hard to trace.

Inconsistent, subjective scoring

Evaluation varied by evaluator and by tender, risking unfair, non-repeatable and hard-to-defend award decisions.

Audit, compliance & sealed bids

Every action needed an immutable trail, strict bidder anonymity and evidence-linked rationale for full accountability.

Strict residency, bilingual UI

All data had to stay on-premises with zero external transfer, plus full English and Arabic right-to-left support.

03 — THE SOLUTION

One platform, the full tender lifecycle

Soft Suave designed a single AI platform where AI recommends and people decide — combining AI-assisted strategy generation, deterministic evaluation and airtight sealed-bid governance on the client's own infrastructure, automating a ten-phase tender lifecycle end to end with every stage human-reviewed and fully audit-logged.

01 AI-Assisted Contract Strategy

STRATEGY · 10 PHASES

Contract Holders generate the CIF, SOW and up to seven strategic artifacts — grounded in the client's historical data and confirmed through mandatory human review — kicking off a ten-phase lifecycle automated end to end.

AI-Assisted Cont…	
Phase 0	Strategy
Artifacts	CIF + SOW + 7
Review	Human-confirmed

02 Deterministic Evaluation Engine

TEM + 9 AI AGENTS

Technical and commercial scores are calculated by approved matrices on a fixed scale, with commercial evaluation delivered through nine sequential AI agents — evidence-traceable, reproducible, and always decided by people.

Deterministic Ev…	
TEM score	82.5 fixed scale
Agents	9 sequential
Award	Reproducible

03 Sealed-Bid Governance & Audit

ON-PREM · EN + AR

Bidder anonymisation, review-only governance and an immutable, timestamped audit of every change, decision and rationale — end to end, entirely on-premises, in English and Arabic.

Sealed-Bid Gover…	
Bidders	Anonymised
Audit	Immutable · Stamped
Residency	On-premises

AI recommends, humans decide — deterministic scoring, evidence-linked justifications and an immutable, timestamped audit trail behind every award.

04 — KEY FEATURES

Built for governance and scale

- AI Document Generation (CIF, SOW, ITT)
- Deterministic Scoring Matrices
- One-Click Evidence Links
- Review-Only Governance
- Immutable, Timestamped Audit Trail
- Sealed-Bid Anonymisation
- AI-Suggested Bidder Shortlists
- Comment-as-Prompt Draft Regeneration
- Nine-Agent Commercial Evaluation
- On-Premises Data Platform Integration
- Bilingual English / Arabic (RTL)
- Multi-Format Reports & KPIs

05 — RESULTS & IMPACT

Engineered from strategy to award

50–60%
Targeted reduction in tender cycle time across the full lifecycle

73%
Contract cycle-time cut reported in a published AI deployment (45 to 12 days)

40%
Typical contract-lifecycle time reduction reported for AI-powered CLM platforms

30%
Of manually drafted contracts contain errors — the risk deterministic evaluation removes

Figure 1 is the platform's contracted target per the business requirements; figures 2–4 are published industry benchmarks for AI contract-lifecycle deployments, not measurements from this engagement.

WHY SOFT SUAVE

Enterprise AI, built for auditability

The client needed far more than automation — a deterministic evaluation engine, a nine-agent commercial pipeline, sealed-bid governance and an immutable audit trail, all running on-premises with full English and Arabic support. Soft Suave delivered the architectural depth and delivery discipline to make it real, with AI kept firmly in a recommend-and-assist role and every decision owned by an authorised human — so every award the platform helps produce is repeatable, evidence-linked and defensible.
