ENERGY · AI CONTENT PRODUCTION PROGRAMME

Brand Forge

An AI Content Production Programme for Enterprise Strategic Communications

Eight AI use cases across content production — video and static assets, multichannel copy, speechwriting, media releases, bilingual Arabization, brand QA, creative optimisation and presentations — built inside the client's own Microsoft and Azure ecosystem, with mandatory human approval gates on every workflow.

INDUSTRY
Energy — national oil & gas (Middle East)

SCOPE
8 content-production AI use cases, brand QA, Arabization

ENGAGEMENT
Phase 1 of a 5-phase, 15-month AI programme

01 — ABOUT THE CLIENT

Communications at national-energy scale

The client is the group strategic communications and brand function of a leading national energy company in the Middle East — a multi-division team responsible for brand management, media relations, content production, internal communications, events, sponsorships and digital channels. A formal operational assessment and executive workshop identified more than 30 AI use cases across the function, structured into a five-phase, 15-month programme to unlock capacity for higher-value strategic work — beginning with content production.

02 — THE CHALLENGE

Production was slow, manual and volume-constrained

Long production cycles
Campaign assets, press releases, speeches and presentations typically required 2–4-day turnaround cycles, limiting responsiveness to real-time developments.

Bilingual publication delays
Manual translation left a consistent gap between English and Arabic content, preventing fully simultaneous bilingual campaign delivery.

Manual brand QA
Quality assurance of brand voice, approved terminology and key-message alignment was manual, producing variable outcomes and slowing approval cycles.

A misaligned talent model
Skilled communicators spent much of their time on production tasks rather than the strategic, editorial and creative work where their expertise creates most value.

03 — THE SOLUTION

Eight AI use cases, one governed pipeline

Soft Suave designed Phase 1 entirely inside the client's Microsoft and Azure ecosystem: frontier LLMs accessed through the enterprise AI studio under a zero-retention policy, brand-safe creative tooling, and orchestrated approval workflows — with human approval gates mandatory across every AI-assisted workflow, so AI assists with production and humans retain full control of final content.

01 AI Content Production

8 USE CASES

Video and static campaign assets, multichannel copy adapted from a single structured brief, first-pass speech drafts grounded on speaker tone profiles, AI-drafted media releases and on-brand presentation decks built from approved templates.

AI Content Produ…	
Brief	Campaign launch
Outputs	Video + 6 channels
Draft	Ready for review

02 Intelligent Arabization

EN + AR · GLOSSARY-GROUNDED

An LLM translation pipeline grounded on the approved corporate glossary and translation memory, with automated quality scoring, deterministic terminology rule-checks and a mandatory human linguist gate for all external content.

Intelligent Arab…	
EN → AR	Scored 94
Terminology	Rule-check p…
Linguist gate	Required

03 Brand QA & Approval Governance

HUMAN-GATED

A multi-agent LLM verification layer scores every submission for brand voice, terminology and sensitivity across four severity levels, while orchestrated approval flows route content through defined human gates with full audit trails.

Brand QA & Appro…	
QA	2 High · 3 Medium
Critical	None
Routing	Gate 2 of 3

AI assists with drafting and production; humans approve every word — brand-safe content at speed, inside the enterprise's own cloud.

04 — KEY FEATURES

Twelve capabilities, one programme

- AI Video & Static Campaign Assets
- Multichannel Copy from One Brief
- AI-Assisted Speechwriting (Tone Profiles)
- Media Release First Drafts
- Glossary-Grounded EN–AR Arabization
- Automated Brand Voice & Messaging QA
- Creative Optimisation from Performance Data
- Automated On-Brand Presentation Builder
- Mandatory Human Approval Gates
- Zero-Retention Enterprise LLM Access
- Embargo Management (Time-Locked Release)
- Central DAM & Audit-Trailed Workflows

05 — RESULTS & IMPACT

Targets set before the first asset ships

40%
Targeted reduction in video production cycle time

75%+
Brand QA first-pass approval rate target across content submissions

<5 min
Brand and messaging QA turnaround per content submission

60%
Share of video output AI-assisted within six months of go-live

Figures are Phase 1 success-criteria targets defined in the programme's requirements baseline, to be validated against pre-deployment baseline measurement.

WHY SOFT SUAVE

Enterprise AI inside enterprise governance

This programme's bar wasn't creativity alone — it was governance. Every sensitive word is processed inside the client's own cloud tenant under a zero-retention policy; brand voice, terminology and sensitivity are checked by an automated QA layer before any human reviewer; translation is grounded on an approved glossary with a mandatory linguist gate; and human approval is mandatory on every workflow, without exception. Soft Suave shaped Phase 1 to enterprise architecture and security standards from day one — with baseline measurement built in, so every gain is provable rather than anecdotal.
