INFLUENCER MARKETING · AI COMPLIANCE PLATFORM BUILD

Post Guard

An AI-Powered Compliance Analysis Platform for Influencer Marketing

Automatically evaluating sponsored social media content — text, images and video — against an organisation's ingested compliance rulebook, returning a clear verdict with confidence score and cited violations in seconds, with an AI assistant for compliant post planning and plain-English rule management.

INDUSTRY	SCOPE	ENGAGEMENT
Influencer marketing & advertising compliance	RAG compliance engine, multimodal analysis, AI assistant, rule management	End-to-end product build — web app & AI services

01 — ABOUT THE CLIENT

Where every sponsored post is a compliance decision

The client operates in influencer marketing, where sponsored content has become a primary advertising channel — and a growing regulatory risk. Brands, agencies and influencers must ensure every sponsored post complies with advertising regulations, such as disclosure requirements, and each platform's own guidelines. Until now that review was largely manual: slow, inconsistent, expensive and unable to scale with campaign volume, with compliance teams checking posts against lengthy rule documents and holding up campaign timelines.

02 — THE CHALLENGE

Manual review couldn't keep up

Slow, unscalable review

Manual compliance review of sponsored posts was slow and didn't scale with campaign volume — every campaign queued behind a human bottleneck.

Inconsistent judgements

Review outcomes varied between reviewers, creating inconsistency across campaigns and real audit risk when decisions were questioned.

Rules differ everywhere

Rules change by platform and by country — Instagram is not YouTube — making manual cross-referencing of the right market's rules error-prone.

Visual content unchecked

Images and video were rarely reviewed with the same rigour as text captions, and updating the compliance rulebook itself was a technical, manual process.

03 — THE SOLUTION

A RAG engine with a human in the loop

Soft Suave delivered PostGuard as a RAG-based compliance platform: compliance PDFs are ingested into a searchable knowledge base, and a two-phase AI pipeline — a reasoning step followed by a structured assessment — evaluates every post against the most relevant rules, returning consistent, explainable verdicts in seconds.

01 Compliance Analysis Engine

TEXT · IMAGE · VIDEO

Every submitted post — text, images and video — is judged against the right platform's and country's rules, returning APPROVED, PLEDGE or REJECTED with a confidence score, cited violations and a full analysis breakdown.

Compliance Analy…

Verdict	PLEDGE
Confidence	87%
Violations	2 cited

02 Multi-Mode AI Chat Assistant

STREAMING · 3 MODES

A FAQ assistant answers compliance questions grounded in the knowledge base, Post Planner plans compliant posts with live web search, and All Rounder classifies each question and routes it to the right mode automatically.

Multi-Mode AI Ch…

Mode	Post Planner
Grounding	Rulebook + web
Usage	Tracked per session

03 Plain-English Rule Management

HUMAN-IN-THE-LOOP

Admins add, update or delete rules in free text; the system semantically matches the request against existing rules and generates a structured change proposal that takes effect only after explicit admin review and approval.

Plain-English Ru…

Request	Add #ad rule
Proposal	UPDATE
Status	Awaiting approval

Every sponsored post judged in seconds against the right market's rules — explainable, auditable and always under human control.

04 — KEY FEATURES

Twelve capabilities, one platform

- Two-Phase AI Analysis Pipeline
- Tri-State Verdicts with Confidence Scores
- Semantic Rule Retrieval (RAG)
- Multimodal Analysis (Text, Image, Video)
- PDF Rulebook Ingestion & Semantic Chunking
- Multi-Mode AI Chat Assistant
- Real-Time Streaming Responses
- Human-in-the-Loop Rule Approvals
- Platform- & Country-Specific Rules
- Result Caching & Duplicate Handling
- Token Usage & Cost Estimation
- Rate Limiting & Graceful Degradation

05 — RESULTS & IMPACT

Built to move compliance from days to seconds

67%
Faster document review reported for comparable GenAI review deployments

42–68%
Operational cost reduction reported for automated compliance processes

90%+
AI review accuracy achieved in benchmark GenAI document-review programmes

20×
Daily review throughput versus manual processing in benchmark automation deployments

Figures are published industry benchmarks for comparable AI compliance and document-review deployments, provided as representative context — not measurements from this engagement.

WHY SOFT SUAVE

Explainable AI, governed end to end

PostGuard had to be more than accurate — it had to be defensible. Soft Suave engineered explainability and governance into every layer: verdicts grounded in retrieved rules with cited violations, a PLEDGE state and confidence scores routing uncertain cases to humans, rule changes and verdicts persisted for audit and dispute resolution, and an async-first architecture that keeps the core compliance check available even when optional services degrade — with per-request token tracking and model-level cost estimates keeping AI spend transparent.
